

The City of Olean is seeking proposals for refinishing approximately 800 sq. ft. of floors at the water filtration plant. The proposals will be split between two areas – a break room and a laboratory area.

This job will require prepping of the existing flooring (which is an existing high build, epoxy-type material) and application of a new flooring surface. We prefer a high build epoxy base finished with a decorative quartz and urethane top coat. Other proposals may be considered.

New York State prevailing rate is required.

Deadline for proposals is MAY 2, 2016 at 5:00 pm.
